Since the construction of the first railroad in Pennsylvania in 1809...

...the importance of rail freight to the Commonwealth has grown dramatically. In the 200 years since that first railroad was built in Delaware County, Pennsylvania’s railroad industry has weathered many ups and downs, from the rise and fall of the Pennsylvania Railroad, to the era of deregulation, to today’s intermodal system - where the door to door convenience of truck service combines with the long distance economy of the railroad.

Through the Great Depression, World War II, mergers and the rise of the trucking industry, Pennsylvania’s rail freight industry has not only survived, but thrived.

The Commonwealth remains a leader nationally in several rail freight indicators, not only in the number of rail operators, but in its support of rail freight and rail freight initiatives.

The economic impact of Pennsylvania’s railroads can be measured in many ways, not only through the thousands of well-paying jobs they bring, but also through tax revenues and indirectly through the many suppliers which rely on rail freight for their livelihood.

With the ongoing globalization of our economy and the growth that will certainly bring in the volume of goods being moved, Pennsylvania must continue in its role as “the Keystone State”, not only from a national, but global perspective. The role and value of the Commonwealth’s vast rail freight industry will remain an important part of that story.

This summary highlights the findings of TAC’s study evaluating...

the economic impacts of railroads in Pennsylvania

Mary Worthington
TAC Economic Impacts of Railroads in Pennsylvania Task Force Chair

Expert rail freight panelists speak out...

On October 6, 2004, the TAC hosted an Expert Panel Forum, with representatives of major rail freight interests throughout the Commonwealth. TAC Task Force Chair Mary Worthington led along with Larry Malski of the Lackawanna County Railroad Authority.

Specific highlights from the panelists’ discussion included the following:

on Short Lines...

Pennsylvania’s short line and regional railroads...

- Connect rural communities to the global market.
- Provide the customized service that shippers require.
- Collectively employ 3,200 and contribute $1.6 million annually in state and local taxes.
- Handle 1 in 4 of all rail cars.

Pennsylvania has 59 short line and regional railroads...more than any other state in the nation.

...the Commonwealth of Pennsylvania...

- A national leader in the support of rail freight operators and rail freight initiatives
- PennDOT’s Bureau of Rail Freight Assistance Program (RFAP) provides $8.25 million of vital assistance annually to regional railroads and short lines.
- The Commonwealth’s Capital Budget provides an additional $20 million.
- Restoring the RFAP to prior budget levels resulted in an improved state rail system.

...Class 1s...

Pennsylvania has 3 Class I carriers: CSX, Norfolk Southern and CP Rail. The largest of these (NS) employs 5,300 and has invested $400 million in the state since 1999.

- The Class 1s continue to divest lines for potential short line expansion.
- Intermodal revenues in Pennsylvania grew 17 percent from 2003 to 2004. Half of NS’ revenue is generated by 10 stations (5 of which handle coal while 5 handle intermodal shipments).

...and the future:

- Rail deregulation (through the Staggers Act) has been a catalyst for growth in Pennsylvania and nationally.
- Rail freight traffic volumes are increasing at significant rates, with growth in both carloads and revenues.
- Intermodal movements are projected to overtake coal as the industry’s top revenue business within the state.

“Pennsylvania is the most rail-savvy state [we] serve.”

- Class I representative
Pennsylvania Rail
rail-related economic impact

The economic impacts of the companies that ship by rail ripple through the state’s economy, through the chain of Pennsylvania suppliers to these companies and to their employees and owners. The value of goods and services produced in Pennsylvania in 2005 that are linked to rail via these indirect, ripple effects is estimated to be nearly $14 billion. The industries linked indirectly to rail employ approximately 107,000 Pennsylvanians and pay out $3.6 billion per year in employee compensation.

Pennsylvania Railroads
by the numbers

- Number of railroads operating in Pennsylvania (more than any other state in the U.S.): 62
- Rail miles in Pennsylvania (9th in the U.S.): 5,100
- Average number of trucks each railcar removes from Pennsylvania’s highways: 4
- Total number of Pennsylvania rail freight employees: 7,565
- Average 2002 annual wage of a Pennsylvania rail freight employee (compared to the state average of $35,000): $54,100
- Billions of dollars in total output related to the rail transportation sector in Pennsylvania: $586M
- Billions of dollars from rail and rail-related activities within Pennsylvania: $3.3B
- The value of goods (in billions) shipped by rail originating in Pennsylvania: $14.4B
- Billions of dollars Pennsylvania businesses receive annually from railroad purchases: $27.2B
- Billions of dollars indirectly to rail employ approximately 107,000 Pennsylvanians and pay out $3.6 billion per year in employee compensation.
Case Study Railroads Identify

to evaluate the economic impact of rail in Pennsylvania, the TAC selected four railroads as case studies. Each case study revealed a wide range of economic benefits. The case study results demonstrate the vast extent of economic activity and indirect benefits associated with Pennsylvania’s rail network. The four railroads included:

- The Norfolk Southern mainline from Philadelphia to Pittsburgh and Reading to Allentown
- The Buffalo & Pittsburgh between Punxsutawney and Bradford
- The Delaware - Lackawanna, and
- The Wellsboro & Corning Railroad.

Significant case study findings:

- Each railroad significantly benefits its shippers and communities.
- Railroad carloadings (and revenues) have increased over the past five years.
- PennDOT’s Rail Freight Assistance Program (RFAP) and capital budget assistance program has allowed railroads to make necessary infrastructure improvements that would not otherwise have been completed.
- Without the railroads, jobs would be eliminated and the competitive position of rail-served businesses would be greatly reduced.
